Math? The Fourier transform, in theory, is defined as $V(t) = \int V(t) e^{i2\pi f t} dt$ If you have V(f) and you want to fransform $V(t) = \int_{0}^{\infty} V(f) e^{-i2\pi f t}$ For theory that's all fine. For data two prosess: only require data for a limited time period V(t) is defined for all times whereas in reality you only acquire data every once in a while say at tooms but not at times in between (i.e. not O.S ms) So, you can't do those integrals for neal clatary
but it would be nice to have an algorithm
appropriate for real data that has similar
properties to the fourier Transform: Indeed there is For N datapoints taken once every T seconds apart, The times for each datapose if any THE PROPERTY OF THE PARTY OF TH ty = { 0, 2, 22, 32, ... k2, ... (N-1) 2} The voltage samples are V = 9 V(0), V(0) ... V((M-1) 2) }

The Farier Transferm is then defined as

from betwee, the integral turned into a sum, time went from a continuous variable with units to just an integer counter K, and frequency went from a continuous veriable with units to just an integer counter n.

Both Vx and Vn still have vnits... but let's be careful!

The inverse transform, to go from Vn brok to VK , shows some of the tricky issues with units.

 $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$ $V_{N} = \frac{1}{N} \sum_{n=0}^{N-1} V_{n} e^{-i 2\pi i n} \frac{k}{N}$

So, different numerical codes that implement these equations put the N in different places, but it's always lunking no matter what.

Also writer the nines signs... gra... and the N

Numerical Recipes Matters IDL Python $\tilde{V}_{\Lambda} = \begin{cases} \sum V_{K} e^{-i2\pi \Lambda \hat{N}} & \sum V_{K} e^{-i2\pi \Lambda \hat{N}} \\ \sum V_{K} e^{-i2\pi \Lambda \hat{N}} & \sum V_{K} e^{-i2\pi \Lambda \hat{N}} \\ \sum V_{K} e^{-i2\pi \Lambda \hat{N}} & \sum V_{K} e^{-i2\pi \Lambda \hat{N}} & \sum V_{K} e^{-i2\pi \Lambda \hat{N}} \\ \sum V_{K} e^{-i2\pi \Lambda \hat{N}} & \sum V_{K} e^{-i2\pi \Lambda$

Some in matlab, the same as NR up to a minus sign, and be very careful of the N in IDL.

4 Va Potting the "n" in what are these Thinking back to the original integrals: $V(t) = \int_{0}^{\infty} V(f) e^{-i2\pi f t}$ for a general complex-valued function there both positive and registive frequencies. for the fft if me use the fftshift function, this secones clearly the case too. yfft = fftsh:ft (fft (ydata) Here, the companion frequency away is $\Delta = /N\tau \qquad f_{ny} = 1/2\tau$ Frequency emy = 2- fry , - fry + D, - fry + DD, -- , O, D, .. fry - A} represents the lowest possible signally you could in your entire dataset. It to oscillates for signal frequency and is the history possible & signal frequency you could see given how often you are sampling the data. It oscillates up in one sample then down in the next. Vollay X ० ४ वर इर time

Normalization (Conventions: Power/Bardwidth or Amplitude? Consider a signal which is broadband white noise time Setting aside implementation, two possible Kinds of pluts we might want exist. One is a plut of amplitude. This graph the peak is +1, great! Easy to interpret. But ... the roise level is weind. Since we nomalized based on sing ward amplitude ... what's a "sine wave amplitude" of noise? Like, what does that Another would be a power/bandwith Kird of plot. Noise power adds incoherently so units of VIHZ make sense becarse Sandwidth plot V 1/4z i.e. V/NHz The noise floor makes sense here, it integrates nicely according to we rule above. But many sine wave isn't noise ...

©TOPS

Achieving these Normalizations

for a real valued function, the positive and regative frequency bins of the FFT contain rearry identical information

V(t) real \Rightarrow $\widetilde{V}(-f) = complex conjugate <math>(\widetilde{V}(f))$

So, we ignore the negative frequencies, and make multiply the positive frequency & values by two. This "conserves information" in some sense. N real numbers for the input voltage time-ordered-data, and N/2 complex numbers for the output voltage FFT.

The zero frequency and fry bins already have some subtle reductancy, so don't multiply them by two.

with that -. let's go to the python add and try out all this sackground theory?
